DECORATIVE CONCRETE SELECTION

South East Queensland's **stylish range** of exposed, coloured and polished concrete

boralstone™

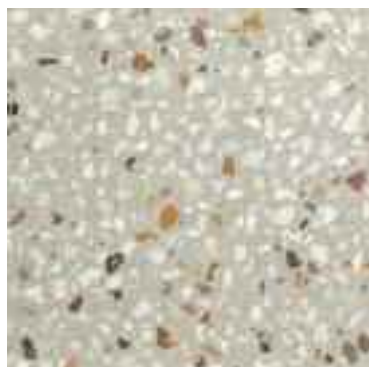

POLISHED CONCRETE

The Boralstone™ range combines the beauty of stone with the strength of concrete, which is then polished to achieve a striking finish. Boralstone™ allows you to personalise your floor to work with the design and colour scheme of the rest of your house or workplace, injecting your individual personality into the overall look and feel. The raw elements in Boralstone™ blend naturally with other products to create new and contrasting combinations.

Snowdrift

Domino

Sahara

Cashew*

Milkyway

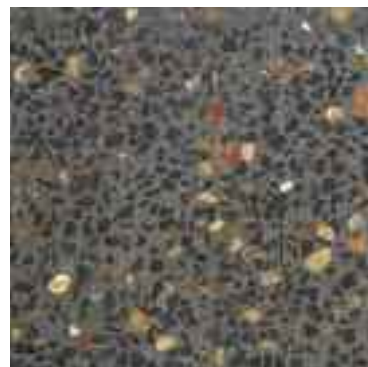

Omega

Ebonite

Hasselti**

Please note: PROTECTION – Always use quality concrete sealing, finishing or exposing agents. Sealing your project may improve the appearance, protect against weathering, and extend the life of your concrete.

* May contain traces of iron found in rock quarries which could stain the concrete. Boral highly recommends the use of sealers with this product.

** Due to constraints on availability of stone this product is not available on the Gold Coast.

The Colori range includes a choice of coloured concrete options which then incorporate various textures, lines, patterns, shapes and other effects into the concrete surface to create an innovative finish. Colori concrete oxides colour the full depth of the entire mix not just the surface to provide a rich colour.

Tungsten

Cool Grey

Carbon

Graphite

Please note: The colour end-result is subject to variation due to environmental factors and raw material changes. Therefore, the ability to achieve an exact colour match is limited. The colours featured act as a guide only.

exposé

EXPOSED CONCRETE

The Exposé range is created through a process resulting in the stone being exposed which highlights the natural elements of the stone. Exposé is ideal for use on outdoor areas, the more heavily exposed finish is perfect for driveways or areas requiring more grip.

Please note: NATURAL PRODUCTS CAN VARY – Boral decorative concrete contains aggregates and other materials that originate from natural quarry products therefore some variation in appearance and consistency may occur. We recommend making final colour selections from an actual sample.

* May contain traces of iron found in rock quarries which could stain the concrete. Boral highly recommends the use of sealers with this product.

** Due to constraints on availability of stone this product is not available on the Gold Coast.

Important information

PLEASE READ BEFORE YOU ORDER

PLAN AHEAD – Decorative Concrete uses speciality ingredients. Please notify us of your total job requirements and allow a minimum of two working days notice from the date the order is placed with Boral. Check weather forecasts in advance, it is vital to the quality of the concrete that it is not exposed to rain, hail, strong winds, debris or very hot or humid conditions during the placing/setting process.

USE A PROFESSIONAL – Decorative Concrete products require greater attention and/or measures when placing and finishing beyond that of regular concrete. Please consult a BSA Approved Concreter about the requirements specific to your project. We recommend the use of joints to reduce the chances of cracking. Boral will not be held accountable for poor placement practices.

DOUBLE CHECK – When the product is delivered and before it is placed, you must check that the description and the product are to your satisfaction and carefully read the information on the delivery docket. Ask the delivery driver to wash off a sample for your inspection. Be sure to wear protective clothing and glasses when handling concrete.

PUMPING – Decorative Concrete products are available in “pump” mixes. These mixes contain less stone and more sand than the regular mixes pictured, please consider the effect this will have on your project prior to ordering the mix. May not suit all pump designs or applications.

NO ADDITIONAL WATER – Your concrete will be designed for a specific water ratio or “slump” as prescribed on the delivery docket. Adding water beyond the prescribed slump may make it easier to work with, however it will also cause a loss of strength and lead to cracking, bleeding and/or dusting issues (pictured below).

PROTECTION – Always use quality concrete sealing, finishing or exposing agents. Sealing your project will improve the appearance, protect against weathering and extend the life of your concrete.

CONCRETE BURNS – Cement based products such as concrete have corrosive properties that may be harmful to the skin or eyes. Please wear appropriate Personal Protective Equipment at all times when handling cement products.

ENVIRONMENT – Cement based products such as concrete can cause lasting damage to the surrounding environment if not properly controlled. Please ensure you or your concreter contains any concrete material and properly disposes of the waste. Consult your local council for more information or advice.

NATURAL PRODUCTS CAN VARY – Boral Decorative Concrete contains aggregates and other materials that originate from natural quarry products therefore some variation in appearance and consistency may occur. We recommend making final colour selections from an actual sample. The illustrations and/or samples pictured are intended as a guide only and not an exact representation of the finished product. Material may contain traces of iron found in rock quarries which could stain the concrete (pictured below).

Cracking

Rust Stain

Professional finishing options

ASK YOUR BSA APPROVED CONCRETER

boralstone™

HIGH POLISH – Degrees of grinding, buffing and sealing to create a semi to ultra smooth finish. Mirror like finishes are possible depending on your needs and budget. Please note polished floors can be slippery and are not recommended for outdoor areas.

BURNISHED – Similar to the “Neutral” product pictured, burnish finish means a polish that exposes only the tips of the stone to give a speckled appearance.

COURSE CUT – Recommended for outdoor applications that may require greater slip resistance than polished finishes. Course Cut offers a similar look to polish but with a raw, render like texture.

colori

BROOM, COVING TROWEL, SPONGE and INPRINTS – Innovative and economical method to create various textures, lines, patterns, shapes and other effects into the concrete surface.

SAND BLASTING – Removing the top layer of concrete to create a rough, sandy look or expose stones in sections and patterns (pictured below). Please note that the Colori range does not include coloured stones.

SAW CUTS and GROOVES – Create tiled effects, lines and shapes using a saw or hand tool.

SURFACE SEEDING – Adding small amounts of stones, pebbles, rock salts, etc. into the surface by hand before the concrete sets. Rock salt dissolves when washed to create indents (pictured below).

exposé

LIGHT EXPOSURE – Taking 1-2mm off the surface after placing reveals less stone. Great for footpaths or outdoor areas.

HEAVY EXPOSURE – Taking 3-5mm off the surface after placing reveals more stone for a more course surface. Great for driveways or areas requiring more grip. Please note that over exposure may cause stones to separate from the surface.
